# KNOW YOUR DRONE

# IMPORTANT DRONE SAFETY INFORMATION

You must not fly your drone higher than 120 metres (400 feet) above ground level.

You must keep your drone at least 30 metres away from other people.

If your drone weighs more than 250 grams, you must fly at least 5.5 kilometres away from a controlled airport, which generally have a control tower at them.

If you're near a helicopter landing site or smaller aerodrome without a control tower, you can fly your drone within 5.5 kilometres. If you become aware of manned aircraft nearby, you will have to manoeuvre away and land your drone as quickly and safely as possible.

You must not fly over or above people or in a populous area. This could include beaches, parks, events, or sport ovals where there is a game in progress.

You must keep your drone within visual line-of-sight. This means always being able to see the drone with your own eyes (rather than through a device, screen or goggles).

You must not fly your drone over or near an area affecting public safety or where emergency operations are underway. This could include situations such as a car crash, police operations, a fire or firefighting efforts or search and rescue.

If you intend to fly your drone for or at work (commercially), there are extra rules you must follow. You will also need to register your drone and get a licence or accreditation.

Remember, you must not operate your drone in a way that creates a hazard to another aircraft, person or property.

Respect personal privacy. Don't record or photograph people without their consent —this may breach other laws.

You must only fly one drone at a time.

You must only fly during the day and you must not fly through cloud or fog.
